Skin effect is the tendency of an alternating electric current (AC) to become distributed within a conductor such that the current density is largest near the surface ...

**Skin effect - Wikipedia**

Electromagnetic induction was discovered by Michael Faraday, published in 1831. It was discovered independently by Joseph Henry in 1832. In Faraday's first ...

**Electromagnetic induction - Wikipedia**

Electrical resistance, electrical resistance) is a property of a material that opposes the flow of electric current. It is measured in ohms (Ω). The resistance of a material depends on its length, cross-sectional area, and resistivity. The resistance of a material is given by the formula:  $R = \rho \frac{L}{A}$ , where  $R$  is the resistance,  $\rho$  is the resistivity,  $L$  is the length, and  $A$  is the cross-sectional area.

Electromagnetic induction is the process of generating an electromotive force (EMF) in a conductor by a changing magnetic field. It was discovered by Michael Faraday in 1831. The induced EMF is given by the formula:  $\mathcal{E} = -\frac{d\Phi_B}{dt}$ , where  $\mathcal{E}$  is the induced EMF,  $\Phi_B$  is the magnetic flux, and  $t$  is time.
